ABOUT ME

Seeking employment with a highly motivational company to expand my knowledge base, improve my skills by working in different environments, and challenge me to surpass my limits. As a proactive individual, my goal in life and everything that I do, is to find the most efficient way to complete the task at hand. Failure is a way of learning and this has been very prominent to me since I started coding. Since then I have learned to embrace what I don't know and see how I can take learn from the experience.

JP MEDALLON

WEB DEVELOPER

PROJECT

Origin Flash Card - React Native, Redux, Loopback

- As most projects are the same as the others here in Origin I wanted to talk more about my final group project which is the biggest difference. We took a big leap using React Native, which was **not** in the curriculum. This was a huge challenge that I was excited for, to see if I can learn a framework separate from what I've learned so far.
- This app is a Tinder clone for JavaScript learning. Swipe left if you don't know the answer, swipe right if you do. It creates space repetition algorithm to determine how often you will see the card again.
- Currently waiting for approval for the Apple Store.
